

## City Ranger 2250

When duty calls in the city - your Nilfisk Outdoor Ranger is ready!

### Assignments in green areas

Your City Ranger can be equipped with a complete attachment programme, for optimum handling of assignments in green areas.

#### Green attachment programme offers:

- Rotary mower • Mulch mower • Grass collector
- Lawn edger • Flail mower/Verticutter
- Hedge trimmer • Tipping shovel • Tipper trailer

### Vac & sweep assignments

The City Ranger 2250 can be fully mounted with a complete Suction sweeper unit offering professional performance in all tasks.

#### Attachment for vac and sweep tasks:

- Suction sweeper unit - 2, 3 or 4 brushes
- Remote vacuum hose • High-pressure cleaner
- Weed brush

### Assignments in winter time

The City Ranger can also be equipped with durable attachments, which efficiently solve the winter seasons demanding tasks.

#### Attachment programme for Winter:

- Snow sweeper • Dozer blade
- Snow V-blade • Snow blower
- Salt and sand spreader

## Power and versatility for city cleaning!

Nilfisk Outdoor presents the 4 cylinder City Ranger 2250 with significantly reduced cabin noise and attractive ECO mode. Small in size - but so big in performance! Strong 35 HP engine with 4 wheel drive handles all Green, White and Black assignments of city cleaning. A complete range of tailor-made quality attachments ensures perfect results. Get maximum versatility and efficiency - by the world's fastest shift between attachments, articulated manoeuvrability, easy handling and operation with maximum operator comfort. A high-end solution for outdoor upkeep - designed, built and assembled, distributed and serviced by Nilfisk Outdoor who all are the Rangers at heart!

## Presenting the City Ranger 2250

### Articulated flexibility

The articulated machine offers optimum flexibility and allows your City Ranger to turn on a plate, and the attractive, compact design ensures access to very narrow paths and spaces.

### 35 HP & 4 wheel drive

The 4 WD and 35 HP offer optimum grip and a power surplus for superior handling of heavy assignments like suction/sweep, weed control, grass collection and the air con performance.

### Quick-shift in 1 minute

Your City Ranger has the world's fastest shift between attachments - performed in just a simple "click" of the Quick-shift - where no mistakes are possible. Get ready for new tasks in no time!

### Easy and simple handling

The Ranger is designed for easy operation with a minimal use of electronics. The operator uses a joy stick to handle the Ranger - which requires no special skills.

### Features/benefits

- Articulated - highly manoeuvrable and good overview
- Flexibility - solves tasks faster
- Compact - operates in narrow spaces

### Features/benefits

- 35 HP - ensures efficient operation
- 4 wheel drive - high traction and propulsion in all conditions
- Solves the jobs in no time

### Features/benefits

- Quick-shift - fast attachment change
- One lever - everyone can handle it
- High efficiency - no hesitation
- Improves return on investment

### Features/benefits

- Less electronics - less downtime
- Joy stick - easy and simple handling
- No special skills - simple for all
- Easy to manoeuvre - very efficient

### Danish designed and built

The Nilfisk Outdoor Rangers and their attachments are Danish designed and built by skilled engineers and craftsmen - monitoring every tiny detail of our solutions.

### Tailor-made attachments

Nilfisk Outdoor has developed each attachment for your Ranger to match the machine perfectly - maintaining flexibility, balance and offering you dedicated top performance.

### Operator comfort

Nilfisk Outdoor focuses on ergonomics in the operation of all functions and handles and easy access to the air conditioned cabin - offering maximum operator comfort.

### Technical specifications

## Winter challenges are no match for a well equipped City Ranger 2250

The City Ranger 2250 handles any kind of snow level - from light to heavy!

### Enter the winter time - with ease of mind

When winter brings snow and icy surfaces - your City Ranger can handle all the challenges. The attachment programme for winter assignments covers: Snow sweeper, Dozer blade, Snow V-blade, Snow blower and Salt and sand spreader. When you change attachments, the hydraulic hoses are connected at the turn of a handle! Maintain all the benefits of the machine performance when operating the tailor-made attachments. When heavy and icy snow covers the ground, you need the Snow V-blade close at hand. It uses the tip of the 'V' to cut through heavy and encrusted snow, separating and pushing it to both sides. Even large amounts of snow are removed with ease.

### Dedicated quality attachments for severe conditions

The demands caused by severe weather conditions are reflected in the quality of Nilfisk Outdoor attachments for white operations. All attachments are designed to supply efficient and dedicated performance. The Snow sweeper is perfect when used with the first snow fall of winter. It will completely remove snow to a depth of 15 cm - even when the terrain is uneven, keeping paths clear and dry. The Snow blower gives extra power for clearing snow. Combine this with the already powerful City Ranger 2250 and clear snow up to a metre high. It is specially-built to deal with heavy work and well-suited to more demanding sites such as ski resorts.

### Doze or sweep, salt or sand - in the same pass

The Dozer blade is attached onto the front of the utility machine and can work in tandem with the Salt and sand spreader attached onto the back. Two jobs done at once. Twice as effective. It operates on streets, paths, pavements, parking areas, etc. The Salt and sand spreader is funnel-shaped - so the salt, sand or gravel is pressed down under its own weight. Even wet material flows freely. The clearing width of the Salt and sand spreader can be increased, up to five metres if needed - highly effective when working on frozen areas and parking areas. On/off cabin control allows the operator to take a break without leaving the cab. And from the comfortable cabin seat in the City Ranger, the operator has excellent visibility - to survey and handle all the challenges of the winter season efficiently.

Sweep the winter away with  
your City Ranger 2250

**The grass is greener on this side  
when your Ranger has cut across**

**The City Ranger 2250 is the perfect green city machine**

### **For the city centre, verges, roundabouts, parks etc.**

The strong City Ranger 2250 is ready to solve all your versatile green assignments. With 35 HP and 4 wheel drive at hand, the job is done in no time. The utility machine has the worlds' fastest change between attachments - less than 1 minute. The articulated City Ranger 2250 offers maximum manoeuvrability and the compact design allows access to narrow paths. The green programme for the City Ranger 2250 offers: Mulch mower and rotary mower 1200 and 1600, Grass collector, Lawn edger, Flail mower/Verticutter, Hedge trimmer, Tipping shovel and Tipper trailer. All our attachments are tailored to match the City Ranger 2250 perfectly, ensuring that you maintain all the benefits of the machine performance and balance.

### **Dedicated attachments improve your performance**

No tools are needed to convert or to adjust e.g. cutting height. The 1200 and extra wide 1600 Rotary and mulch mowers are front mounted and highly manoeuvrable - even in high working speed and uneven terrain. Our high tip Grass collector combines two units: a Rotary mower to collect the grass and a 750 l hopper to store it. Grass has no chance when the Flail mower is in action. With a clearing width of 1.226 mm, it mows all grass, whatever its height or toughness. Changing the flails with vertical blades converts the Flail mower into a Verticutter, which deals with moss and weeds without the need for pesticides. A diversified and efficient attachment.

### **Trims hedges, cuts edges - and takes the load**

Trim the hedges and cut the edges with our professional attachments and make your park and green areas look good and attractive to enter for the public or customers. The Tipping shovel is an ergonomic attachment, taking care of heavy lifting and loads. The steel shovel is strong and robust, with a lifting capacity of 125 kg and second to none when it comes to shovelling snow, etc. An ideal attachment for gardeners and park keepers who typically work with sand, gravel, compost and stone - and combined with the tipper trailer - the transport is in place. All our attachments allow you to get the job done rapidly with a perfect working result. The green attachment programme offers highly diversified operation, at a low investment.

**No time is wasted cutting the grass  
with your City Ranger 2250**

## Sweep the city in a user and citizen friendly utility machine approved by EU

The City Ranger 2250 fulfils all the demands of public municipalities

### Gain maximum flexibility and access in all tasks

The City Ranger 2250 can be fully fitted with a complete Suction sweeper unit offering professional performance, flexibility and accessibility to narrow spaces in all tasks. Our attachment programme for vac and sweep tasks consist of: Suction sweeper unit - 2, 3 or 4 brushes, Remote vacuum hose, High-pressure cleaner and Weed brush.

The Suction sweeper is one of the most indispensable attachments designed for the City Ranger 2250. The utility machine owes its all-year-round capability to this attachment. In spring the operator can clean grit and grime, left over from the winter, from streets and paths. In the autumn it takes care of the wind-blown leaves and dirt. In summer it keeps the outdoor areas free of cans, paper, litter etc.

### Professional efficiency - approved to friendliness

High suction power performance is combined with PM10 certification, low emission and noise-levels and EU environmental approval. You achieve state-of-the-art power and an environmentally friendly utility machine that ensures perfect cleaning results. The Suction sweeper is effective everywhere - on paths and pavements, verges, driveways, outdoor and indoor parking areas, etc. straight into any nook or cranny. The Suction sweeper unit has two, three or four brushes, each with its own water sprayer, a remote vacuum hose with nozzle, a water tank and a hopper for the collected rubbish. The equipment units are designed to work perfectly together.

### Dust control with unique filter system

Each brush has its own water sprayer. The water container (100 l) is connected to the hopper, which is equipped with a unique self-cleaning rotary filter system. The filter binds dust to the water, preventing it from blowing out of the sides of the hopper. Fitting and removal of the Suction sweeper unit is quick and easy with the special designed roller stand. The five metre long remote vacuum hose is always ready to vacuum. When not in use, it is discreetly fitted on top of the container. The Weed brush is the perfect, most-effective eco-friendly tool for keeping outdoor areas weed-free, i.e. specialised in pavements, paths, flagstones, asphalt, etc. - without the use of pesticides. Let the City Ranger 2250 sweep the weeds in your city - and nothing is left behind. You will be amazed of its capacity!

Get professional capacity with  
your City Ranger 2250

# Nilfisk Outdoor Division

**Ingenuity and reliable quality solutions are the trademark of Nilfisk Outdoor Rangers**

*Efficient and professional assembly at Nilfisk Outdoor*

## **Environmentally friendly**

At Nilfisk Outdoor we focus on a continuous improvement of all the environmental aspects of our products. Right from minimising the external effects on citizens and operator - like sound, fumes and other hazards from operation, to the improvement of dust control by efficient filter systems and the right material quality - highly recyclable.

## **Top quality**

Nilfisk Outdoor makes no compromises in our technologies and product materials. We aim at the high end of the quality scale, and have established a complete set of best practices for all processes in our production - from logistics to assembly and test - all in order to ensure the highest durability and long lasting product lifetime.

## **One stop concept supplier**

When you choose your City Ranger, you can rest assured, that we have taken all aspects of your investment into consideration. Our designers and engineers are in control of every part of the machine, and tailor-made attachments match and maintain the products performance - so you will benefit - now and in the future.

## **Leasing options**

In order to accommodate the different market needs on financing your purchase, Nilfisk Outdoor now offers a leasing solution as an option. Contact your local Nilfisk Outdoor distributor in order to learn more about the leasing conditions and terms - and find out how leasing can be an attractive alternative to obtain your Ranger.
